Figure 1

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group received a standard diet, while the experimental group received a diet supplemented with 10% of the total energy from omega-3 fatty acids. The subjects were then subjected to a 12-week period of physical training. The control group received a standard diet, while the experimental group received a diet supplemented with 10% of the total energy from omega-3 fatty acids. The subjects were then subjected to a 12-week period of physical training. The control group received a standard diet, while the experimental group received a diet supplemented with 10% of the total energy from omega-3 fatty acids.
